

ALERT

COLD WEATHER AHEAD; BE PREPARED!

Starting Sunday please be aware of the weather conditions and prepare for freezing temperatures.

Freeze Warning Tips for Residents

When temperatures are forecasted to be below 32 F, water pipes can freeze, burst, and cause a great deal of damage. Help protect your home by taking these steps during a freeze:

- *Let your faucets drip! Run both hot and cold water in a very fine stream in each of your apartment's faucets: kitchen sink, bathroom sinks, bath tubs, showers, etc.
- *Open your cupboards! Leave the cabinet doors under all sinks open so that the pipes will be ventilated with warm air. Leaving the bathroom and kitchen doors open helps too.
- *Heat your home! If you leave for the day (or an extended period of time) do not turn the heat completely off. Turn it on, set to the lowest setting you wish (60° is recommended).

**Stay Warm and try to
stay off the roads.**

Drip your faucets!

Bring Pets inside.

**Open cabinet doors
to keep pipes warm.**

Bring Plants inside.
